

MUSTAFO RAHIM

Urgench, Uzbekistan | +998 (90) 557-97-65 | rahim.mustafo.x@gmail.com | github.com/rahim-mustafo-x

PROFESSIONAL SUMMARY

Full-Stack and Mobile Software Engineer focused on Java/Spring Boot backends and Kotlin Multiplatform development. Experienced in building end-to-end applications, REST APIs, Android and cross-platform clients, database-backed services, automation, and containerized deployment workflows. Interested in system design, defensive programming, and reliable infrastructure.

TECHNICAL SKILLS

Languages: Kotlin, Java, SQL, Python, Bash, JavaScript, HTML, Rust (beginner)

Backend: Spring Boot, Spring Security (JWT), Spring Data JPA, Hibernate, Ktor, Spring Cloud, REST APIs

Mobile: Kotlin Multiplatform, Compose Multiplatform, Jetpack Compose, Coroutines, Flow, StateFlow, Koin, Room, Retrofit

Data & Caching: PostgreSQL, Redis, SQLite, JDBC, Bucket4j

DevOps & Tools: Docker, Docker Compose, Linux/Ubuntu Server, Git, GitHub Actions, CI/CD, SSH, ZeroTier

EXPERIENCE

Full-Stack & Mobile Developer

Jan 2023 – Present

Independent / Open Source

- **Built and deployed 3 Android applications** (Muslim Taqvim, eQarz, e-Qarz Hamkor) serving 700+ active users.
- **Developed Davomat**, an attendance-tracking system with a Spring Boot REST API, PostgreSQL, a React web client, and an asynchronous Telegram bot.
- **Implemented offline-aware mobile architecture** using Jetpack Compose, Room, Retrofit, and StateFlow to handle intermittent connectivity.
- **Set up distributed rate limiting and deployment automation** with Redis, Bucket4j, Docker Compose, and GitHub Actions.

Android Developer

Nov 2024 – Jul 2025

Mustafo Software LLC · A1Tech Group

- **Worked on the data layer and API integration** for Obod Shahar, a production consumer application published on Google Play.
- **Integrated backend services with Retrofit and asynchronous data flows**, maintaining clear DTO → domain → database mappings.
- **Collaborated in a team environment** using pull requests, Git-based workflows, code review, and continuous integration practices.

Telegram Bot Automation Engineer

Aug 2025 – Present

Independent

- **Built concurrent Telegram bots** with Python, aiogram, and PostgreSQL, using finite-state-machine workflows for multi-step interactions.
- **Integrated bot workflows with Spring Boot REST services** to connect messaging interfaces with backend operations and database queries.

SELECTED PROJECTS

FootTop | Cross-Platform Booking & Tournament Suite

- Built a Kotlin Multiplatform application with shared business logic for Android and iOS. Implemented MVI-based shared UI, filtering, geo-sorting, complex queries, pagination, and memory-conscious list loading.

Self-Hosted Linux Lab & Infrastructure

- Configured a headless Linux environment with static networking, Dockerized services, and ZeroTier-based remote connectivity for production-like infrastructure experiments.

EDUCATION & TRAINING

Software Development Program

IT Park Khorezm, Uzbekistan

High School Diploma

Urgench School No. 18 | Expected Graduation: May 2027
